ELECTRO-ACUPUNCTURE AND ASSISTED REPRODUCTIVE TECHNOLOGY: IMPACT OF EA ON ENDOMETRIUM DURING MEDICATED FROZEN EMBRYO TRANSFER

Principal Investigator: Hui Yan Cai, L.Ac., Ph.D

This randomized study aims to evaluate the impact of electro-acupuncture on endometrium of women undergoing medicated frozen embryo transfer at a local fertility center. The treatment group will receive acupuncture treatment during uterine preparation and ultrasound and laboratory tests performed routinely during the fertility procedures, the researchers will determine if electro-acupuncture has an effect on endometrial lining.
